LA GESTION DU CLIMAT SONORE SOUNDSCAPE MANAGEMENT

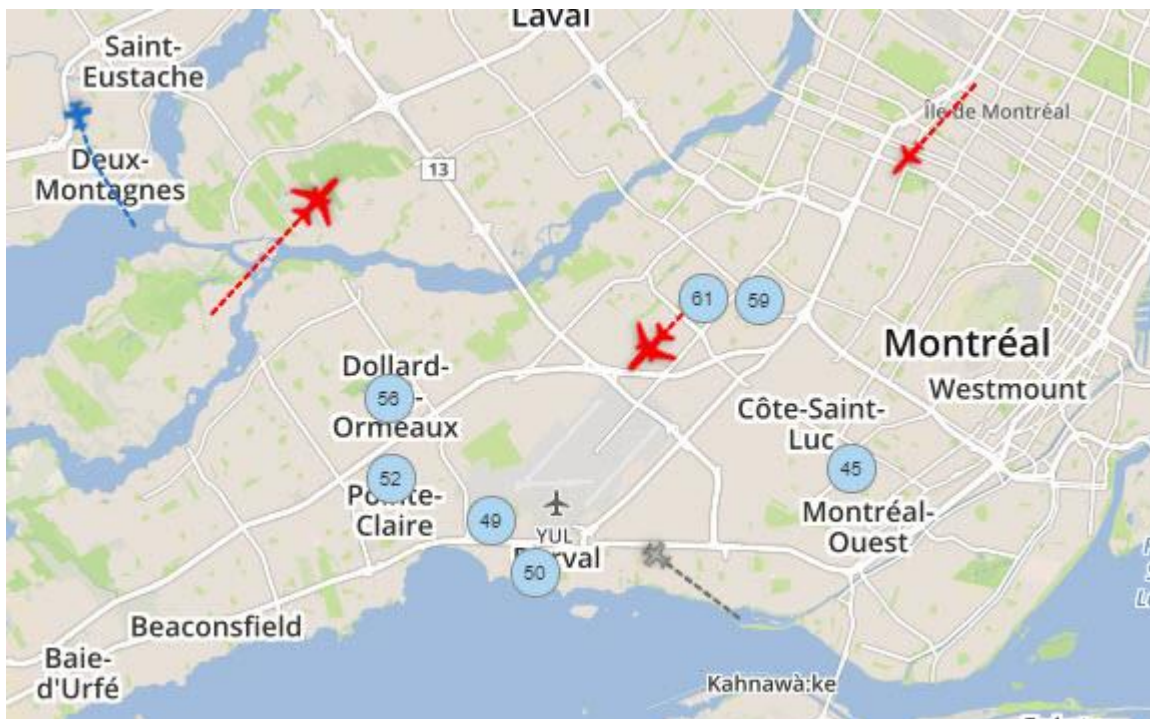

NEWSLETTER

MAY 9, 2019

NEW: WEBTRAK ONLINE TODAY

Today, Aéroports de Montréal is launching [WebTrak](#), the system that displays flight data including flight tracks, aircraft types, their altitude as well as the noise levels recorded at the noise monitoring stations.

This initiative represents an important first step in carrying out the soundscape management plan and offers a great access to aircraft activity data at YUL, Montréal-Trudeau International Airport.

WebTrak is available on the Internet and through a smartphone. You can locate an address on the map, display flight data in near real time and easily file a complaint. The complaint is then linked to a flight movement and directly registered in the soundscape management system, which will allow for more accurate analyses.

WebTrak provides flight information from NAV CANADA's radar data. Data are available after a 10 minute delay and can be viewed retroactively for a period of 30 days. For security reasons, information on the airline and flight number cannot be displayed and operations of military and law enforcement flights are not available.

In addition, ADM is launching the [mobile version of the web form](#) to file a complaint via smartphone. The form offers a log-in function and once connected, you can file a complaint in two clicks. These complaints are also registered directly in the soundscape management system which improves the analysis and reporting process.

For more information, visit the [soundscape management section](#) on ADM's website.
