

Construction of the noise barrier

OCTOBER 2017

ADM is completing the final steps necessary before beginning work on the noise barrier.

You will recall that this will be a 5-metre-high plant noise barrier composed of a low wall of willows on an earth bank.

Work on the site will begin early in the new year and should end in the summer of 2018. Following that, we will complete the landscaping and tree planting in accordance with the preferences you expressed to us.

Despite treatment for the emerald ash borer, some land clearing work will be required along the 25-metre band.
